

(2) poulse
$$4$$
: $I_{71} = \frac{a^3b}{12} = \frac{3a^4}{24} = \frac{a^4}{8}$

Paulne 2:
$$I_{72} = \frac{ab^3}{12} = \frac{27a^4}{36} = \frac{9a^4}{32}$$

donc la poulre 1 flechira le plus.

contraints max:
$$V_{MAX} = M_{\frac{2}{4}} \cdot \frac{8}{4} \cdot \frac{\alpha}{2} = \frac{4}{\alpha^{3}} M_{\frac{2}{4}}$$

$$V_{MAX} = M_{\frac{2}{4}} \cdot \frac{8}{2} \cdot \frac{\alpha}{2} = \frac{4}{\alpha^{3}} M_{\frac{2}{4}}$$

$$V_{MAX} = M_{\frac{2}{4}} \cdot \frac{32}{2} \cdot \frac{1}{2} \cdot \frac{3\alpha}{2} = \frac{8}{3\alpha^{3}} M_{\frac{2}{4}}$$

In flach pan les
$$L$$
, $V = y_{HX}$
on a $\Pi_{2} = EI_{2}y_{1}^{"}(x)$
doni $y_{1}^{"}(x) = \frac{\Pi_{1}z}{1EI_{2}}$ donc $V(x) = \frac{\Pi_{1}z}{EI_{2}} \times c_{1}x + c_{2}x$
où c_{1} et c_{2} soul des combantes.

$$V(0) = 0 \qquad (a \ l'encastrement la floche est mille)$$

$$donc \ c_{2} = 0$$

$$\frac{dV}{dx}(0) = c_{1} = 0 \quad (car \ a \ l'encastrement pos de robotion)$$
On a donc
$$V(x) = \frac{1}{2} \frac{1}{2} \times \frac{x^{2}}{2}$$

dore V > V

I21 < I22
